

325 Track 1 Agent

Hybrid Token-Efficient Router

AMD Developer Hackathon Act II · Track 1

Built by Milton J Acosta III · Solo Developer

Why We Win

93.2% local solve rate · 69/74 tasks at ZERO tokens

96.8% token savings · 600 vs 18,500 all-Fireworks

11 solver types across 6 domains

3-tier cascade: Local · Fireworks MI300X · Dual Consensus

54.5MB Docker · MIT License · 125 test tasks

Architecture

Task Classifier · Local Solvers (0 tokens, <1ms)

OR

- Fireworks AI on AMD MI300X + ROCm 6.0
- Dual-model consensus on complex tasks

Simulation mode when no API key available

Adversarial Robustness

50 adversarial edge cases:

36 solved locally (72%)

14 escalated to Fireworks (28%)

0 silent failures

Published failure taxonomy · 5 known gaps, all escalate correctly

No competitor documents their failures

Token Savings

Standard 74 tasks: 600 tokens used

All-Fireworks baseline: 18,500 tokens

Savings: 96.8%

At platform scale (1M queries/day):

\$5.3M saved annually

vs Competition

Token Frontier: 6,351 tokens / 19 tasks / 89.5% accuracy

325 Agent: 600 tokens / 74 tasks / 93.2% local

41x more efficient on 4x more tasks.

11 solvers vs 0 local solvers.

125 tests vs 19 tests.

Published failures vs none.

Thank You
